

# INSTRUCTIONS AND PARTS LIST FOR Models 8-025, 8-050, 8-075, and 8-150 Elec-Draulic II Presses

## **SETTING UP THE PRESS FOR OPERATION**

For shipping convenience some of the parts are not assembled. Assemble these parts in the following order:

1. Bolt the base angles to uprights using four bolts and nuts, which are provided. Make sure base angles are against stops on uprights.

NOTE: The press should set on a level floor with the base angles touching the floor at all points. Use shims where necessary.

2. Switch box is mounted on left upright. Have electrician connect switch to power line. Pump can rotate in either direction.

3.

4. Oil Requirements: Fill reservoir thru street elbow at back of press with Mobil DTE oil No. 24 or equivalent. NOTE: Oil level may be checked (with ram up) by removing the pipe plug on the right side of reservoir near the front. Replace plug before operating the press.

Model 8-025 uses 3 gallons Model 8-050 uses 3 gallons Model 8-075 uses 3 gallons Model 8-150 uses 10 gallons

- 5. Attach nose piece to ram by inserting shank into ram and tightening the set screw.
- 6. CAUTION! Place the hoist crank on the lift drum shaft. The table is raised to the desired height by turning the crank after removing the table pins. Check to make sure the hoist cable is tracking correctly. Run the table channels from top to bottom. The cable should be on each of the two upper pulleys and should track back and forth on the cable drum. Always place table pins under the table channels when servicing or tracking the cable. If a tracking problem exists, contact the Dake factory for instructions. Be sure all table pins are fully inserted in place before applying pressure. Always remove or release pressure on the cable before pressure is applied.

#### **OPERATIONS**

The press has been completely tested at the factory and after setting up according to instructions above, the press is ready for operation. However, it is necessary for the operator to acquaint themselves with the controls.

- 1. Handcrank is provided to raise and lower table channels to proper height for work. When desired height is obtained insert table pins. Models 8-025 and 8-050 use 2 pins on each side (4 total) and Models 8-075 and 8-150 use 3 pins on each side (6 total).
  - NOTE: Be sure all table pins are in place and in as far as they can go before pressure is applied, also slack off on the cable.
- 2. The two table plates and two V-blocks are used for supporting the work in process.
- 3. The control handle on the right side of the press is used for operation of the press. When the control handle is held in the down position, the ram will move down. When the control handle is held in the up position, the ram will move up. Upon release, the control handle will return to the neutral position and ram motion will stop. Pressure builds upon contact with the work. It is not necessary to stop the motor after each operation.

4. The relief valve located in the manual valve has been set at the factory to open at the maximum tonnage of the press. The valve can be adjusted by removing the hex cap nut located on the lower left hand front corner of the manual valve. Turning the adjusting screw counterclockwise lowers the setting.

#### **MAINTENANCE**

CAUTION: When disconnecting any parts of this machine be extremely careful that all parts are clean to prevent entrance of dirt in the hydraulic system.

- 1. If press loses Pressure:
  - a. Check all tubing joints for leaks and tighten the tube nuts.
  - b. Trouble shoot throttling 4-way valve. Refer to bulletin on Dynex throttling 4-way valve.
  - c. Worn cup leather (Serial No < 192522) or T-ring seal (Serial No > 192523). If none of the previous conditions seem to have been the cause of the trouble, the cup leather or T-ring seal may be worn out or damaged. To inspect this it is necessary to drain the oil and remove the workhead from the press frame. Remove tube assembly (Item No. 48 & 49). Insert a rod into the hole located on the top side of cylinder and unscrew workhead assembly from frame. Insert rod into the hole on piston guide (item 47) and unscrew from cylinder. Remove piston from cylinder. The cup leather or T-ring seal can now be inspected and replaced if necessary. Also at this time, inspection of rod seal (item 44) and O-ring seal (item 43) is recommended. Replace if necessary in reverse order being careful not to damage the T-ring seals and O-ring seal.
- 2. If press will not develop rated tonnage.
  - a. Relief valve not set properly. This valve is located in the lower left hand front corner of the manual valve. The valve has been set at the factory to by-pass oil from the pump back to the reservoir when the pressure reaches rated capacity. To expose the relief valve for adjusting remove the control handle ball (item 53), the control panel (item 57), and the hex cap nut. The load on the spring which governs the pressure at which the valve will by-pass is adjusted by turning the adjusting screw clockwise to raise the setting. Replace the hex cap nut, control panel, and control handle ball after adjusting. The relief valve should not be tampered with after it is once set at the capacity of the press.
  - b. Trouble shoot throttling 4-way valve. Refer to bulletin on Dynex throttling 4-way valve.
  - c. Worn cup leather or T-ring seal (see Section I, item C above)
- 3. If nothing happens when press is operated.
  - a. If motor does not run, the electrical circuit should be investigated.
  - b. If the ram will come down only a fraction of its rated stroke, check the oil level in the reservoir with the ram at the top of its stroke. Oil should be visible when the oil level plug located on the rear of the reservoir is removed.
- 4. If press is operating slow, check for use of improper oil. It is essential that the recommended oil, Mobil DTE 24 or equal be used. Heavier oils cause marked reduction in the ram speed. **DO NOT USE HYDRAULIC JACK OIL!**
- 5. If press builds pressure and is not contacting the work on the down stroke, the rated extended stroke may be exceeded.
- 6. If press builds pressure on the return stroke the rated retract stroke may be exceeded.

  CAUTION: Prolonged building of pressure at each end of the piston stroke may damage the workhead.
  - CAUTION: When disconnecting any parts of this machine be extremely careful that all parts are clean to prevent entrance of dirt in the hydraulic system.

### **WARNING LABELS**

A

To the left is the safety Alert symbol. When you see these safety alert symbols on your press, be alert to the potential for personal injury.

Follow recommended precautions and safe operating practices.

Carefully read all safety messages in these instructions and on your press safety signs.

Keep safety labels in good condition. Replace missing or damaged safety labels. **This machine is intended to be operated by one person.** This person should be conscious of the press ram movement not only for himself but also for persons in the immediate area of the machine.

Item	Part Name	Part number	Qty
2-6	Pressure head repair kit one each of 2-6	54165	1
13	Grommet	47298	1
39	Handle	301328	1
41	Saddle	301329	1
48	Dual valve operating lever	301330	1
* Kit	Valve segment unit repair kit, includes one each of items 25 and 30 thru 34, two each of items 14, 16, 18, 24, 26 and 28, four each of 15 thru 17, 6 each of 13	67741	1 or 2
**Kit	Segment replacement, includes one each of 19 thru 23, 25, 27, 30 thru 34, 41, 44 and 45, two each of 14, 16, 18, 24, 26, 28, 29, 37, 38, 42 and 43.	301735	

<sup>\*</sup>Note: 1 pc. For a 3 way valve (new 3 way valve part number is 29661) **These Dynex valves have all ½" NPT port sizes** 2 pc. For 4 way valve (new 4 way valve part number is 29662)

29662 Dynex valve replaces the Dake valve 26-300 and 26-302. Repair kit for the 26-300 is part number 710146. No repair kit available for the 26-302.

29661 Dynex valve replaces the Dake valve 26-301. Repair kit for the 26-301 is part number 710146.

**Note**: If replacing a Dake valve with a Dynex valve, the port location may be different than the Dake valve.

<sup>\*\*</sup> Note: This kit is completely assembled and pre tested and ready for service.
